1.10

$$m_t = \sum_{k=0}^{p} c_k t^k$$

$$\nabla m_t = m_t - m_{t-1}$$

$$= \sum_{k=0}^{p} c_k t^k - \sum_{k=0}^{p} c_k (t-1)^k$$

$$= \sum_{k=0}^{p} c_k \left(t^k - (t-1)^k\right) = \sum_{k=0}^{p} c_k \underbrace{\left(-\sum_{j=0}^{k-1} \binom{k}{j} t^j (-1)^{k-j}\right)}_{\deg = k-1 \leq p-1}$$

Do đó ∇m_t là đa thức bậc $p-1$.

Theo nguyên lý quy nạp, ta có $\nabla^p m_t = \text{const}$ là đa thức bậc 0

$$\Rightarrow \nabla^{p+1} m_t = \nabla^p m_t - \nabla^p m_{t-1} = 0$$

1.11

(a) $a_j = \dfrac{1}{2q+1}$, $-q \leq j \leq q$

$$\sum_{j=-q}^{q} a_j m_{t-j} = \frac{1}{2q+1} \sum_{j=-q}^{q} \left(c_0 + c_1 (t-j)\right)$$

$$= \frac{1}{2q+1} \left(c_0 (2q+1) + c_1 \sum_{j=-q}^{q} (t-j)\right)$$

$$= \frac{1}{2q+1} \left(c_0 (2q+1) + c_1 t (2q+1)\right) = c_0 + c_1 t = m_t$$

(b) $E[A_t] = E\left[\sum_{j=-q}^{q} a_j Z_{t-j}\right] = \sum_{j=-q}^{q} a_j E[Z_{t-j}] = 0$

$$\mathrm{Var}[A_t] = \mathrm{Var}\left[\sum_{j=-q}^{q} a_j Z_{t-j}\right]$$

$$= \sum_{j=-q}^{q} a_j^2 \,\mathrm{Var}[Z_{t-j}] = \frac{1}{(2q+1)^2}\sum_{j=-q}^{q}\sigma^2 = \frac{\sigma^2}{2q+1}$$

<u>1.12</u>

(a) $$\sum_j a_j m_{t-j} = \sum_j a_j \sum_{r=0}^{k} c_r (t-j)^r$$

$$= \sum_j a_j \sum_{r=0}^{k} c_r \sum_{i=0}^{r} \binom{r}{i} t^i (-j)^{r-i}$$

$$= \sum_{r=0}^{k} c_r \left(\sum_{i=0}^{r} \binom{r}{i} t^i \sum_j a_j (-j)^{r-i} \right) \quad (1)$$

Ta cần có $\sum_j a_j m_{t-j} = m_t = \sum_{r=0}^{k} c_r t^r \quad (2)$

Từ (1), (2) $\Rightarrow$ $t^r = \sum_{i=0}^{r} \binom{r}{i} t^i \sum_j a_j (-j)^{r-i}$, $\forall r \in \{0, 1, \dots, k\}$

$r = 0 \Rightarrow 1 = \sum_j a_j$

$r = 1 \Rightarrow 1 = \sum_{i=0}^{1} \binom{1}{i} \sum_j a_j (-j)^{1-i} = \underbrace{\sum_j a_j}_{1} + \sum_j a_j (-j)$

$\Leftrightarrow \sum_j j a_j = 0$

Tương tự với $r = 2, 3, \dots, k$, ta được $\sum_j j^r a_j = 0$

(b) $[a_0, a_1, \dots, a_7] = \frac{1}{320}[74, 67, 46, 21, 3, -5, -6, -3]$

$$\left.\begin{array}{l} \bullet \ \sum_{j=0}^{7} a_j = 1 \\ \bullet \ \sum_{j=0}^{7} j^r a_j = 0, \ \forall r \in \{1, 2, 3\} \end{array}\right\} \Rightarrow \text{đpcm}$$

1.13

$m_t = c_0 + c_1 t$, c_0, c_1 arbitary

Without distortion $\Leftrightarrow$ $m_t = (1 + \alpha B + \beta B^2 + \gamma B^3) m_t$

$$\Leftrightarrow \quad \alpha m_{t-1} + \beta m_{t-2} + \gamma m_{t-3} = 0$$

$$\Leftrightarrow \quad \alpha(c_0 + c_1(t-1)) + \beta(c_0 + c_1(t-2)) + \gamma(c_0 + c_1(t-3)) = 0$$

$$\Leftrightarrow \quad (c_0 + c_1 t)(\alpha + \beta + \gamma) - c_1(\alpha + 2\beta + 3\gamma) = 0 \quad , \forall c_0, c_1, t$$

$$\Leftrightarrow \begin{cases} \alpha + \beta + \gamma = 0 \\ \alpha + 2\beta + 3\gamma = 0 \end{cases} \qquad (1)$$

Eliminate arbitary seasonal components of $d = 2$

$$\Leftrightarrow \begin{cases} (1 + \alpha B + \beta B^2 + \gamma B^3) s_t = 0 \quad , \forall t \\ s_{t+2} = s_t \quad ; \quad s_1 + s_2 = 0 \end{cases}$$

$$\Leftrightarrow \begin{cases} s_t + \alpha s_{t-1} + \beta s_{t-2} + \gamma s_{t-3} = 0 \\ s_{t+2} = s_t \quad ; \quad s_1 + s_2 = 0 \end{cases}$$

$$\Leftrightarrow \begin{cases} s_t(1+\beta) + s_{t-1}(\alpha + \gamma) = 0 \\ s_{t+2} = s_t \quad ; \quad s_1 + s_2 = 0 \end{cases}$$

$$\Leftrightarrow \quad 1 + \beta = \alpha + \gamma \quad (2)$$

$$(1), (2) \Rightarrow \begin{cases} \alpha + \beta + \gamma = 0 \\ \alpha + 2\beta + 3\gamma = 0 \\ \alpha - \beta + \gamma = 1 \end{cases} \Leftrightarrow (\alpha, \beta, \gamma) = \left(\frac{1}{4}; \frac{-1}{2}; \frac{1}{4}\right)$$

1.14

$$[a_{-2}, a_{-1}, a_0, a_1, a_2] = \frac{1}{9}[-1, 4, 3, 4, -1]$$

$$\left.\begin{array}{l} \bullet \ \sum_{j=-2}^{2} a_j = 1 \\ \bullet \ \sum_{j=-2}^{2} j^r a_j = 0, \ \forall r \in \{1,2,3\} \end{array}\right\} \Rightarrow \text{Passes third degree polynomial trends without distortion}$$

Seasonal component with $d = 3$: $\begin{cases} s_{t+3} = s_t, \ \forall t \\ s_1 + s_2 + s_3 = 0 \end{cases}$

$$\begin{aligned} \sum_{j=-2}^{2} a_j s_{t-j} &= \frac{1}{9}(-s_{t-2} + 4s_{t-1} + 3s_t + 4s_{t+1} - s_{t+2}) \\ &= \frac{1}{9}(-s_{t+1} + 4s_{t-1} + 3s_t + 4s_{t+1} - s_{t+2}) \\ &= \frac{1}{3}(s_t + s_{t+1} + s_{t+2}) = 0 \end{aligned}$$

$\Rightarrow$ Eliminates seasonal components with period 3.

1.15

(a)

$$\left.\begin{aligned} \nabla\nabla_{12} X_t &= \nabla\nabla_{12} m_t + \nabla\nabla_{12} s_t + \nabla\nabla_{12} y_t \\ \nabla\nabla_{12} m_t &= \underbrace{\nabla\nabla_{12} a}_{0} + b\nabla\nabla_{12} t \\ &= b(1-B)(1-B^{12})t \\ &= b(1-B-B^{12}+B^{13})t \\ &= b(t-(t-1)-(t-12)+(t-13)) = 0 \\ \nabla\nabla_{12} s_t &= (1-B-B^{12}+B^{13})s_t \\ &= s_t - s_{t-1} - s_{t-12} + s_{t-13} = 0 \end{aligned}\right\} \Rightarrow \nabla\nabla_{12} X_t = \underbrace{\nabla\nabla_{12} y_t}_{\text{stationary}}$$

$$\gamma_{\nabla\nabla_{12}X}(h) = Cov(\nabla\nabla_{12}X_{t+h}, \nabla\nabla_{12}X_t)$$

$$= Cov(\nabla\nabla_{12}y_{t+h}, \nabla\nabla_{12}y_t)$$
